**EXAMINER'S COMMENT*****Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 15, 62, 65 and 66 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 7, 8, and 14-16 of copending Application No. 11/817,303. Although the conflicting claims are not identical, they are not patentably distinct from each other because the methods of the '303 application recite using the same cell types and screening for the same compounds as the instant claims because the same protein (ZNFN3A1, SEQ ID NO: 4 in the '303 application, when translated, is identical to the instant SEQ ID NO: 2) is to be the basis for the screen.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

**However, this is the only remaining rejection in the earlier filed application (i.e. this application, 10/788,847), and thus according to MPEP §804 I B. 1., this rejection is withdrawn.**

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: the claimed methods of screening for compounds that inhibit the protein of SEQ ID NO: 2 (aka ZNFN3A1, SMYD3) are not taught by the prior art. The properties of SEQ ID NO: 2 in promoting the proliferation of cells was not recognized until the publications of Hamamoto et al (Abstracts from Jap. Cancer Assoc., 9/26/2001, and JAMTTC, 2002, of record, citations C24 and C21 and from the IDS dated 3/18/2004). Although SEQ ID NO: 2 was disclosed by Tang et al (WO 00/44900, of record) prior to the instant filing date, Tang et al do not teach the claimed methods of using cells that do nor do not express SEQ ID NO: 2 for the screening of compounds, nor the involvement of SEQ ID NO: 2 in the proliferation of cells. Regarding the 35 USC 112-1st para. rejections found in the previous Office Action, applicants arguments submitted 2/10/2009, in conjunction with the teachings of the specification, are convincing. It is clear from the teachings of the specification that SEQ ID NO: 2 is prominently involved in cell proliferation and is a promising target for potential therapeutics that might inhibit the activity of the compound. Given this, and the disclosure of general screening assays for compounds that inhibit the activity of SEQ ID NO: 2, the skilled artisan would have understood the necessity of negative controls in such screens in order to efficaciously eliminate false positive results. Such negative controls are represented by the 3T3 cells transfected with various vectors in Examples 5 and 6.
